IECEE OPERATIONAL DOCUMENT

IEC System of Conformity Assessment Schemes for Electrotechnical Equipment and Components (IECEE System)

TRF – Development, maintenance and use
CONTENTS

FOREWORD .................................................................................................................................................. 725

Part 1 – General introduction to the TRF procedures ................................................................................... 10108
  1.1 Scope .................................................................................................................................................. 10108
  1.2 Purpose ............................................................................................................................................. 10108
  1.3 Forms associated with OD-2020 .................................................................................................... 10108
  1.4 Definitions ....................................................................................................................................... 10108
  1.5 Structure of OD-2020 ....................................................................................................................... 10108
  1.6 Use of TRFs for other purposes ......................................................................................................... 10108

Part 2 – Assignment and distribution process ............................................................................................ 11119
  2.1 Request for a TRF ............................................................................................................................ 11119
  2.2 Appointment of TRF Originator ...................................................................................................... 11119
  2.3 TRF Distribution of new and modified TRFs .................................................................................. 12129
  2.4 TRF Trial and Comment Period ..................................................................................................... 121210
  2.5 Simplified procedure for TRF distribution .................................................................................... 121210
  2.6 Procedure for the circulation of TRFs to TC/SC Officers ................................................................ 121210

Part 3 – Instructions on how to prepare new TRFs .................................................................................... 131311
  3.1 General rules ..................................................................................................................................... 131311
  3.2 Formatting requirements ............................................................................................................... 131311
  3.3 Identification of the IEC or ISO Standard and its edition, TRF number and Master TRF .............. 131311
  3.4 TRF structure .................................................................................................................................... 151513
  3.5 Standardized attachments .............................................................................................................. 181816
  3.6 Instructions for TRF originators ...................................................................................................... 191917
  3.7 TRF Originator’s responsibility before submitting Test Report Form to IECEE ...................... 202018
  3.8 Special case TRFs ........................................................................................................................... 202018
  3.9 Example of a Test Report Form ....................................................................................................... 232321
  3.10 Use of landscape-oriented pages in the TRF ............................................................................... 232321
  3.11 Use of abbreviations in the Test Reports ..................................................................................... 232321

Part 4 – Requests for modifications to TRFs ................................................................................................ 242422
  4.1 General ............................................................................................................................................ 242422
  4.2 Modifications required due to an updated TRF Template .............................................................. 242422
  4.3 Requests for technical modifications to published TRFs ............................................................. 242422
  4.4 Requests for corrections to published TRFs .................................................................................. 252523
  4.5 Simplified procedure for TRF distribution .................................................................................... 252523
  4.6 Updates of the IECEE list of TRFs ............................................................................................... 252523

Part 5 – Instructions on how to fill in TRFs ................................................................................................ 262624
  5.1 Modifications to the TRFs ............................................................................................................... 262624
  5.2 Completing TRFs ............................................................................................................................ 262624
  5.3 A blank Test Report consists of four sections ............................................................................. 262624
  5.4 First section of the TRF .................................................................................................................. 262624
  5.5 Second section of the TRF ............................................................................................................. 272725
  5.6 Third section of the TRF ................................................................................................................ 272725
  5.7 Fourth section of the TRF .............................................................................................................. 282828
  5.8 Special requirements ..................................................................................................................... 282828
5.9 Attachments to the CB Test Reports ......................................................... 292927
5.10 CB Test Reports for split testing projects ............................................... 292927

Part 6 – Instructions on how to prepare amendment reports .................................. 302029

6.1 General ........................................................................................................ 302029
6.2 Type of changes to CB Test Reports .......................................................... 302029
6.3 Identification of changes to CB Test Reports .............................................. 313130
6.4 Amendment Report example ..................................................................... 313130
6.5 Issuing a CBTR and CBTC over another CBTC ............................................ 323231

Annex A – Void (Reserved for future use) ......................................................... 333332

Annex B – Void (Reserved for future use) ......................................................... 2

Annex C – Guide on use of photographs in CB Test Reports ............................... 3

C.1 General Requirements .................................................................................. 3
C.2 Specific requirements .................................................................................... 3
C.3 Photographs to be taken .............................................................................. 3
C.4 Storage and distribution .............................................................................. 4

Annex D – Example of a TRF page in landscape orientation ............................... 5

Annex E – Instructions on how to complete Test Reports ..................................... 6

Annex E1 - Completing TRFs based on template OD-2020-F1 ............................... 6

E.1.1 TRF Cover Page .......................................................................................... 7
E.1.2b CB Testing Laboratory name and testing locations .................................... 101010
E.1.3 List of attachments .................................................................................... 101010
E.1.4 Summary of testing ................................................................................... 101010
E.1.5a Summary of compliance with National Differences (List of countries addressed): 111110
E.1.5b Statement concerning the uncertainty of the measurement systems used for the tests): ................................................................. 111110
E.1.6 Copy of marking plate .............................................................................. 121211
E.1.7 Test items particulars ............................................................................... 121211
E.1.8 Possible test case verdicts ....................................................................... 131311
E.1.9 Testing dates ............................................................................................. 131311
E.1.10 General Remarks .................................................................................... 131312
E.1.11 Manufacturer’s Declaration per subclause 4.2.5 of IECEE OD 02 ................ 131312
E.1.12 Name and address of factory/factories ................................................... 141413
E.1.13 General Product Information and other remarks: ................................... 141413
E.1.14 Different test cases and clause types require different type of input .......... 151513
E.1.15 Component information: ........................................................................ 161615
E.1.16 Test Measurement section ...................................................................... 171716
E.1.17 Additional options .................................................................................. 202019
E.1.18 List of test equipment used ................................................................. 212120

Annex E2 – National Differences section .............................................................. 222221

E.2.1 Completing TRFs based on Template OD 2020-F2 .................................... 222223
E.2.2 – Completing TRFs based on Template OD 2020- F3 ................................ 252525
E.2.3 – Cover page of Template OD 2020- F3:2022 ........................................... 272726

Annex F – Example of Amendment to the original Test Report ............................ 292928

Annex G – Examples of TRF Identification and naming of its corresponding file 353534

Annex H – Use of TRFs for purposes other than CB Scheme ............................... 383836

Annex I – TRF Flowchart for Originators, Administrator and Users .................... 393937

Part 1 – General introduction to the TRF procedures

1.1 Scope
This Operational Document (OD) addresses various stages of Test Report Form (TRF) development, distribution, maintenance, and use. It also includes various examples to illustrate the requirements.

1.2 Purpose
For the most part, this OD has been prepared to address the needs of TRF originators, TRF users and TRF administrators. The purpose of this OD is to provide instructions to all parties involved in the TRF procedures and to address the certification, data exchange and other IECEE community needs, as appropriate.

1.3 Forms associated with OD-2020
- TRF Template form OD-2020-F1
- EU GD (EN Group Differences) Template form OD-2020-F2
- ND (National Differences) Template form OD-2020-F3
- TRF Originator Checklist form OD-2020-F4
- Request for TRF modification form OD-2020-F5
- PID (Product description) form withdrawn
- EMC TRF template form OD-2020-F7
- Cyber Security TRF Template form OD-2020-F8

See Annex K for the latest edition, effective date, target revision date and history of changes.

1.4 Definitions
For definitions of TRF, TRF Originator and CB Test Report, see Document IECEE Definitions.

1.5 Structure of OD-2020
The OD consists of six Parts and twelve Annexes, which complement each other and together describe the complete TRF process. Individual Parts may be used to serve a specific purpose, for example, Parts 5 and 6 address the needs of CB Test Report compilers.

1.6 Use of TRFs for other purposes
If a TRF is not used to generate a CB Test Report, the IECEE/IEC logo and the reference to the CB Scheme procedure shall be removed; however, the copyright statement shall be retained. See Annex H for details.
Part 2 – Assignment and distribution process

2.1 Request for a TRF

The request for a TRF is basically made by IECEE member that has presumably received an application for testing and certification of product(s) falling under a determined standard. The request shall be addressed to the IECEE Secretariat in writing to the following email address: secretariat@iecee.org

Upon receipt, the IECEE Secretariat checks whether the requested TRF is:

- Already available.
- Available but requiring updates.
- In process of being originated/updated by an assigned IECEE member.
- Not available.

2.1.1 If the requested TRF is already available or in process of being originated/updated, the requesting IECEE member is notified by the Secretariat.

2.1.2 If TRF is not available or an update is needed but not available:

a) In case the requested TRF is an update and has been previously assigned to or prepared by other member, the IECEE Secretariat will consult with that member prior to making any additional inquiries among participating NCBs.

b) In case the originator is not able to update the TRF within a defined time frame, or there is no assigned originator for the TRF, the requesting IECEE member will be asked to originate the relevant TRF. However, as a pre-condition, the requesting member must have been accepted to issue CB Test Certificates based on the relevant IEC and/or ISO standard(s).

c) In case the requesting member has already created a draft of the updated TRF, the Secretariat may ask the originator to review the draft and authorize its publication. The IECEE Secretariat will then publish the agreed version of the TRF as final TRF without changing the originator. Unless agreed otherwise, the review is limited to two weeks. Lack of review in this time frame will trigger Secretariat action to publish the TRF via simplified procedure (See Annex I and clause 4.3), under the name of requesting member as the new TRF originator.

d) In case when more than one member is willing to originate the TRF, the development of new TRF is assigned to the Organization that offers the best timeframe subject to being accepted for the standard for which the TRF will be based on.

e) If the requesting member is not prepared to develop the TRF, the IECEE Secretariat immediately starts a formal consultation among other members seeking an NCB willing to originate the missing TRF.

NOTE: It is assumed that the NCB, which has got received the application for certification purpose, will undertake the responsibility of originating the TRF, should the consultation made by the IECEE Secretariat among the IECEE members lead to a no-offer. In case no originator can be found, the requesting member is expected to drop the TRF request.

2.2 Appointment of TRF Originator

The IECEE Secretariat will formally appoint an IECEE member as the TRF Originator according to a), b) or c) above, as appropriate.

The originator will develop the assigned TRF following the requirements in Part 3.
2.3 TRF Distribution of new and modified TRFs

Once the appointed originator completed the TRF, the originator forwards the relevant TRF in MS Word format to the IECEE Secretariat via email (See Annex I).

The TRF originator shall advise the IECEE Secretariat whether the TRF should be distributed via regular or via simplified procedure (See Annex I and clause 4.3 of this OD for details).

2.4 TRF Trial and Comment Period

New TRFs that are not distributed via simplified procedure can be used on a trial basis for three to six months. IECEE distributes the TRF to members and publishes on the IECEE Website as a provisional TRF.

During the trial and comment period, users are expected to provide feedback to the IECEE Secretariat (See Part 4, Annex I). IECEE Secretariat informs the TRF originator about the findings and requests that comments be addressed, when appropriate.

For new or updated TRFs, the IECEE Secretariat will verify the correct Test Report Reference Number, layout, editing, etc. prior to publishing the TRF in the relevant areas of both, the IECEE Web Site for the members and the IEC Web Store for outsiders, or return to the originator for corrections.

The IECEE Secretariat informs the IECEE members about the publication through e-mails each time a new TRF(s) are posted on the IECEE Web Site and IEC Web Store.

Part 4 of this OD describes the process addressing users' requests for modifications to the content of a TRF, as well as administrative changes.

Annex I and Annex J describe the procedure for TRF modification requests and distribution.

2.5 Simplified procedure for TRF distribution

The simplified procedure for TRF distribution is described in Clause 4.5 and in Annex I.

2.6 Procedure for the circulation of TRFs to TC/SC Officers

A weekly e-mail is sent by the IECEE Secretariat to the IEC Central Office Technical Department, the technical department then forwards the TRFs, excluding Group and National Differences extracted from the provided zip file. The IEC Technical Department sends the TRF files to the IEC TC/SC officers responsible for the standard.

Furthermore, an e-mail addressed to the IEC TC/SC Secretary and Assistant Secretaries, where applicable, with copies to the IEC TC/SC Chairman and IEC CO TO is also sent.
Part 3 – Instructions on how to prepare new TRFs

3.1 General rules

The originator shall always use the latest TRF template available on the IECEE Website Rules, Operational documents & Guides (https://www.iecee.org/documents/refdocs/). This applies to the TRF itself and to the National and Group Differences TRFs.

3.1.1 As a basic rule, one TRF covering IEC or ISO requirements shall be developed according to Part 3 of this OD. For the National and Group Differences, if relevant, separate TRFs shall be prepared in accordance with Clause 3.5.1 and 3.5.2.

3.1.2 The Group Differences TRFs shall be developed by the originator located within the region where the Group Differences are applicable. This may result in a different originator for the IEC and ISO TRF and for the Group Differences TRF.

3.1.3 In general, a separate TRF shall be prepared for Part 1 and for each Part 2 standard.

However, the originators may choose to prepare a TRF for a combined Part 1 and one or more Part 2 standards (Example: standards IEC 60335 and IEC 60598 Series). For uniformity of all TRFs in a particular series of standards, the originator shall always start with the approved Part 1 TRF, when available, and incorporate Part 2 requirements into Part 1 TRF (See also clause 3.8.3, Generating TRFs combining several Part 2 standards).

NOTE: The combined TRFs may cause undesired consequences, such as when mistakes are found in the Part 1 TRF, the corrections to all affected combination forms will be required. The originators should always consider the pros and cons of merging Part 1 and Part 2 TRFs into one form.

3.2 Formatting requirements

The following formatting and identification instructions shall be considered when preparing new or modifying old TRFs:

File format: Microsoft® Word for Microsoft 365 file format .docx Microsoft Word Rich Text Format (*.rtf)

(Note: Rich Text format in MS Word 2007, 2010 and 2013 are compatible)

Font: Normal text: Arial 10 pt (True Type)

Special characters (e.g. °, ∆): Symbol (True Type)

Paper size: A4 (210 x 297 mm)

Margins: Top 2 cm, Bottom 2 cm, Left 3 cm, Right 1 cm (standard margins)

Optional: Left 2 cm, Right 2 cm (CBTL using double sided printing may modify the margins)

Language: English (UK)

3.3 Identification of the IEC or ISO Standard and its edition, TRF number and Master TRF

3.3.1 The TRF standard shall be identified on the first page of the TRF as detailed in Annex G.

When Part 2 TRF is not incorporated into Part 1 TRF, the standard identification shall be followed by the reference to the corresponding Part 1. This applies to all Particular standards that require use of specific (dated reference) Part 1.

A Corrigendum is not required to be mentioned in the standard identification field

The inclusion of the Corrigendum in a TRF is to be included by the TRF Originator in the General remarks of the TRF. See below:
3.3.2. IEC/ISO Standard references used in TRFs

For the purpose of the CB Scheme Test Reports and Certificates do not use consolidated editions.

NOTE: AS OF 2016, THE STANDARD NOMENCLATURE USED ON THE IECEE WEBSITE HAS BEEN CHANGED TO BE IN LINE WITH IEC PRACTICE. THE EDITION WAS REPLACED WITH THE YEAR OF STANDARD PUBLICATION.

The IECEE nomenclature shall be used to identify standards in TRFs. (Refer to IECEE Website for standards operated by the CB Scheme).

Examples of correct standard references:

<table>
<thead>
<tr>
<th>Examples</th>
<th>New reference on TRF</th>
<th>Old reference on TRF</th>
</tr>
</thead>
<tbody>
<tr>
<td>Original standard publication</td>
<td>IEC 62368-1: 2010</td>
<td>IEC 62368-1 (ed. 1)</td>
</tr>
<tr>
<td>Original standard publication with Am.1</td>
<td>IEC 60934:2000, AMD1:2007</td>
<td>IEC 60934 (ed.3); am1:</td>
</tr>
<tr>
<td>Original standard publication with Am.1 &amp; 2</td>
<td>IEC 60950-1:2005, IEC 60950-1:2005/AMD1:2009, IEC 60950-1:2005/AMD2:2013</td>
<td>IEC 60950-1(ed.2); am1, am2</td>
</tr>
<tr>
<td>Original standard publication</td>
<td>ISO 80601-2-56:2009 for use in conjunction with IEC 60601-1:2005</td>
<td>ISO 80601-2-56 (ed.1) for use in conjunction with IEC 60601-1 (ed.3)</td>
</tr>
<tr>
<td>Part 2 TRF only</td>
<td>IEC 60601-2-2: 2009 for use in conjunction with IEC 60601-1: 2005</td>
<td>IEC 60601-2-2: (ed. 5) for use in conjunction with IEC 60601-1 (ed. 3)</td>
</tr>
</tbody>
</table>

NOTE: The above table has been added to provide clarity for new TRF references.

3.3.3. Test Report Form Number

The TRF Number consists of IEC/ISO standard and the letter identifying TRF version and it shall be on the first page of the TRF and in TRF footer.

The National Differences TRF number shall include the prefix: Country Code followed be _ND or EU_GD_ and the corresponding Test Report Form Number. See also Annex G.
3.3.4. Master TRF

The date of Master TRF shall be the date of TRF publication. See also Clause 4.3.7 and 4.4.2.

NOTE 1: The IECEE Secretariat is responsible for ensuring that the TRF master date and publication date are matching, and the suffix letters are correct.

NOTE 2: The National Differences TRF date (Master Attachment date) is the publication date and typically this date does not match the Master TRF date.

3.3.5. TRF files naming convention

The TRF file name shall include TRF number and the TRF master date. For examples, see Annex G.

3.4 TRF structure

A Test Report Form must be easy to fill in and shall not include macros, except for the Test Report Number and the page numbers. Check boxes may be used as allowed by the TRF template. The originator may add protected fields but only if necessary. See instructions in Annex A.

A blank Test Report consists of four sections as specified below. The Testing Laboratory always completes the first four sections including the critical components (section four). (See Annex E and clause 3.4.4).

If National Differences are included during product investigation (see clause 3.5.1) then an attachment covering National Differences shall also be completed.

3.4.1 General information section (Section 1 of the TRF)

The first section is a cover page (applicable to all Test Reports) that contains the general information, such as the name and address of the Applicant/Client, Report reference number, standard used, TRF number, product name and product rating, trademark, and other information. An example of the first page of TRF is shown in Annex E.

Pages that follow the cover page (normally four or more pages) contain specific information related to testing procedure and testing locations, list of attachments, product under testing, investigated National Differences, general tests and samples information. An example of information pages can be found in Annex E.

3.4.2 Compliance checklist (Section 2 of the TRF)

This section of the TRF is a standardized section consisting of a checklist, referencing clause by clause the requirements of a particular IEC or ISO standard. (See Annex E).

NOTE 1: Sub-clauses that are explanatory notes do not need to be detailed in the checklist.

NOTE 2: It is recommended that the Compliance Checklist is one table with header for each new clause in Capital letters, bold and shaded (12.5%) while each sub-clause has only bold letters.

The compliance checklist section is formatted into 4 columns. For practical reasons each column heading (below) appears as a table heading on each page of this section, e.g., the whole section may be one table and the table heading is repeated at the beginning of each page. When this is not practical, the table may be split into several smaller tables, however, the headers are repeated on each page.

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement - Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
</table>

In order to fully utilize the available space on each page, the typical width of each cell in the test case section shall be as follows: 2 cm, 8.3 cm, 5 cm and 1.6 cm. (A4 page width is 21 cm, margins 4 cm and about 0.1 is left for lines width).
**Cl./Clause** - is a reference to the standard’s clause or sub-clause

**NOTE 3:** Identical clause numbers of subsequent test cases are not repeated (printed) in the compliance checklist table.

**Requirement – Test:** a summary of the requirement and/or an abbreviated description of a test.

Different test case types may be presented in one of the following ways (each type is followed by an example).

### 3.4.2.1 Test case types

**Heading**

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement - Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>30</td>
<td>CONSTRUCTION</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Sub-heading**

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement - Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>10.5</td>
<td>Markings for Class II appliances</td>
<td>Pass</td>
<td></td>
</tr>
</tbody>
</table>

**Regular test case**

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement - Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>21.1.1</td>
<td>Marking on main part</td>
<td>Pass</td>
<td></td>
</tr>
</tbody>
</table>

When regular test case requires a specific result or comment in addition to the verdict, it needs to be identified by a dotted leader as in the example below:

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement - Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>20.5</td>
<td>Length ≥ 10 m............................... : 12.5</td>
<td>Pass</td>
<td></td>
</tr>
</tbody>
</table>

Auxiliary test case, not requiring a verdict but additional information only, needs to be identified by a shaded verdict field (shading is 12.5% gray):

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement - Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.2.1</td>
<td>Test temperature (°C).................... :</td>
<td>23.5</td>
<td>—</td>
</tr>
</tbody>
</table>

### 3.4.2.2 Results and verdicts

**Result:** Any information that results from column 2, such as a measured value, a remark or an explanation, if applicable.

**Verdict:** A judgment resulting from analysis of columns 2 and 3. Allowed verdict choices are:

- **Pass**
- **Fail**
- **N/A (Not applicable)**

**Exceptions** apply to category MED and CYBR.

In product category MED, for TRFs based on the IEC 60601-1:2005, third edition, including Am.1, an exception is allowed as described in the Guideline Document on Medical Equipment in the CB Scheme according to the IEC 60601 and IEC/ISO 80601 Series of Standards, OD 2055. This exception includes an additional verdict N/E (Not evaluated), which is temporarily permitted for...
Collateral standards that can be excluded from the IECEE CB Scheme investigation. See also OD-2044.

In product category CYBR, for TRFs based on the standards in the scope of the program (IEC 62443 series), an additional verdict is added. The requirements that are outside the scope of applicant’s submittal shall be given verdict N/E (Not evaluated).

The following meaning of N/A verdict relates to category CYBR: “Test case was evaluated and does not apply to the test object”

Note: The intent of this clarification is to show the difference between N/A verdict given after the evaluation and N/E verdict where the test case is not evaluated by the CBTL based on request from the client.

3.4.3 Measurement section (Section 3 of the TRF)

This section contains tables with the measured values, specific test conditions, test remarks and additional testing information.

All measurement tables shall have supplementary information field at the bottom of the table to provide room for clarification of test parameters or test conditions.

An example of a measuring section is shown in Annex E.

Note: In product category MED, in TRFs based on the IEC 60601-1 2005, third edition, an additional type of tables, called Risk Management Tables, is required when Risk Management is used for verification of compliance. See OD 2044, Guidelines for risk management in medical electrical equipment and Clause 3.8.4.2 in this OD.

3.4.4 Critical components and/or materials section (Section 4 of the TRF)

A table describing critical components and/or materials is an integral part of each TRF, except for TRFs for performance standards, where critical components table is not applicable.

The Critical Components and Materials table should normally be the last section after the measurement section to assist in prompt identification of component information in the Test Report. This table has only the title and does not require a number. It can have two styles of rows. The first style has six columns:

a) Object / part No. => Name of component or identifier, for example mains switch, T10, C3, F1 (ID of the components on schematics, wiring diagrams, and similar), main enclosure, bottom plate, terminal pins….

b) Manufacturer/trademark => the manufacturer’s name shall be specified, except for some materials (for example metal plate, heat sink, terminal pins) or for generic components specified in CTL Decisions, such as PWB.

c) Type / model => When applicable, a designation that allows identification of the component

d) Technical data => Relevant ratings and/or characteristics for components that are critical for compliance with the standard (for example the following may apply but is not limited to electrical component ratings, material thickness, flammability rating and similar)

e) Standard => Applicable IEC, ISO or National harmonized component standard, or end-product standard if investigated as part of the end-product investigation. See Clause 5.7.3.

f) Mark(s) of conformity => Evidence ensuring the agreed level of compliance. See OD-2039.

The second-row style is to allow more space for additional information. This row consists of two columns: “Description” and a free text field.
A typical component table has the following layout:

<table>
<thead>
<tr>
<th>TABLE: List of critical components</th>
</tr>
</thead>
<tbody>
<tr>
<td>Object/part No.</td>
</tr>
<tr>
<td>Manufacturer/trademark</td>
</tr>
<tr>
<td>Type/model</td>
</tr>
<tr>
<td>Technical data</td>
</tr>
<tr>
<td>Standard No. Edition year²</td>
</tr>
<tr>
<td>Mark(s) of conformity¹</td>
</tr>
</tbody>
</table>

- Description:

Supplementary information:
1) Provided evidence ensures the agreed level of compliance. See OD-2039.

NOTE 1: The free text field provides additional space for information that may not fit in the standard cell format. The use of this row is optional, and when used, it is always in conjunction with the object/part number specified in the row above it. An example of completed table is provided in Annex E.

NOTE 2: See clause 5.7.3 for additional details.

3.4.5 List of Test Equipment (when applicable)
The Equipment list form is part of the TRF template.

3.5 Standardized attachments

3.5.1 National Differences (when applicable)

a) This attachment is used for National Differences requirements. The National Differences Test Report Forms are structured as described in Clause 3.4.2 except a unique cover page is used for National Differences TRFs. A measurement section may also be included in the National Differences TRFs (as in clause 3.4.3) when needed to record specific measurements.

NOTE: By “National Differences” it is meant National Differences, Group Differences and Special National Conditions. Normally, the National Differences TRFs are provided by Member Bodies at the time of the Acceptance of Standards used in the IECEE CB Scheme as the basis for the national certification or are prepared by the originator appointed by Member Body or by the IECEE Secretariat.

b) Countries listed in the “Summary of compliance with National Differences” field of the TRF may only include those countries for which either a completed National Differences TRF is attached or those countries that declared no National Differences.

c) When the investigation covers more than one edition of the standard, a TRF that includes the requirements from more than one standard edition may be used (see clause 3.8). In this case the attached National Differences TRFs may need to address National Differences to more than one edition of the standard as applicable for the target countries requested by the Applicant.

d) Individual National Differences TRFs may be combined into one attachment with all pages numbered sequentially, or each National Differences TRF might be placed one after the other, however, the list of attachments must include the list of all National Differences TRFs attached.

A separate National Differences TRF for Part 1 and Part 2 Standards may also be combined into one attachment with all pages numbered sequentially.

Examples of TRFs for National Differences are shown in Annex E. See form OD-2020-F3 for National Differences template.

3.5.2 Group Differences TRF (when applicable)
This attachment is used for Group Differences requirements. See form OD-2020-F2 for Group Differences template.

NOTE: Currently, only EU countries officially declare this type of Differences.
3.5.3 Photographs and Oscillograms
Photographs of tested products are required in CB Test Reports. Some standards may also require including oscillograms or diagrams in the Test Report. See clause 5.9.1 and Annex C for details.

3.6 Instructions for TRF originators

3.6.1 The “Requirement – Test” column in the TRF is a summary of the requirement. The full text of the standard shall not be repeated.

3.6.2 All pages of the Test Report Form shall be numbered continuously with the total number of pages indicated.

3.6.3 The TRF is a part of the conformity assessment, therefore, the wording used in the “Requirement – Test” column needs to be simple and needs to prompt for a clear “Pass”, “Fail” or “N/A” verdict.

(Note: Acceptable verdicts are also repeated in the TRF template).

3.6.4 Words such as “shall” and “should” are respectively reserved for requirements and recommendations in the standard. Since the Test Report requires a confirming verdict for each clause, it is necessary to use indicative rather than imperative phrases when abbreviating the requirements.

EXAMPLE: Instead of: “Time-delay fuse shall be used”, the correct wording in the TRF states “Use of time-delay fuse”.

3.6.5 Sub-header style in the TRF is used when many regular test cases apply to the same header. However, the use of too many sub-headers in a sequence without any regular test case entries that follow the sub-headers should be avoided when possible. It makes the TRF to lengthy, difficult to handle and computerize.

3.6.6 Special care must be taken to avoid situations in which a “Fail” verdict in the Test Report could be acceptable in overall product compliance.

EXAMPLE: (Provided example is based on the IEC 60950(ed.3).

The standard calls for a flammability test and allow repeating that test or running an alternate test in case of a failure. Therefore, the “Fail” verdict would be entered in the TRF for the first test, in which the failure occurred. In order to avoid this situation, the TRF originator must design the report form in such a way as to avoid the negative results. This could be accomplished by any of the methods presented below or similar, equally effective.

3.6.6.1 TRF may provide instructions for CBTL in the “Remarks” column:

<table>
<thead>
<tr>
<th>A.6</th>
<th>Flammability tests for classifying materials V-0, V-1 or V-2</th>
<th>Pass</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.6.1</td>
<td>Samples, material ........................................ :</td>
<td>Material designation FR-556</td>
</tr>
<tr>
<td></td>
<td>Wall thickness (mm) ....................................... :</td>
<td>0.5</td>
</tr>
<tr>
<td>A.6.5</td>
<td>Flammability test compliance criteria</td>
<td>NOTE: This clause is not applicable if test per A.6.6 was conducted</td>
</tr>
<tr>
<td>A.6.6</td>
<td>Permitted re-test</td>
<td>All samples of the second set met the relevant criteria.</td>
</tr>
</tbody>
</table>

3.6.6.2 TRF may combine both tests in one clause and a comment can clarify the testing.

<table>
<thead>
<tr>
<th>A.6</th>
<th>Flammability tests for classifying materials V-0, V-1 or V-2</th>
<th>Pass</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.6.1</td>
<td>Samples, material ........................................ :</td>
<td>Material designation FR-556</td>
</tr>
<tr>
<td></td>
<td>Wall thickness (mm) ....................................... :</td>
<td>0.5</td>
</tr>
<tr>
<td>A.6.5</td>
<td>Compliance criteria and permitted re-testing</td>
<td>All samples passed the permitted re-testing.</td>
</tr>
</tbody>
</table>
3.6.6.3 TRF may utilize "type 3 verdict" (Auxiliary test case, requiring additional information but not a verdict):

<table>
<thead>
<tr>
<th>A.6</th>
<th>Flammability tests for classifying materials V-0, V-1 or V-2</th>
<th>Pass</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.6.1</td>
<td>Samples, material ........................................</td>
<td>Material designation FR-556</td>
</tr>
<tr>
<td></td>
<td>Wall thickness (mm) .........................................</td>
<td>0.5</td>
</tr>
<tr>
<td>A.6.5</td>
<td>Flammability test............................................</td>
<td>Add comment as appropriate</td>
</tr>
<tr>
<td>A.6.6</td>
<td>Permitted re-test ...........................................</td>
<td>Add comment as appropriate</td>
</tr>
<tr>
<td></td>
<td>Compliance criteria for flammability tests and re-tests</td>
<td>Pass</td>
</tr>
</tbody>
</table>

3.6.7 The end-product standards may contain requirements from normative, referenced standards. As long as a clear verdict (Pass, Fail or N/A) for these requirements can be found, either in the main standard or in the referenced standard, and there is a provision to include the verdict in the TRF, these clauses can be incorporated in the main TRF. As an alternate option, an attachment addressing the requirement or a separate test report for the referenced standard can be used.

3.7 TRF Originator’s responsibility before submitting Test Report Form to IECEE

3.7.1 Care must be taken to avoid common TRF mistakes before submitting the TRF to IECEE for distribution to members.

3.7.2 The originators are expected to validate the submitted TRF using the checklist for TRF Originators (See form OD-2020-F4).

3.8 Special case TRFs

Special case TRFs are only developed when IECEE members have identified market needs. They are not applicable and/or practical for all product categories.

An example of special case TRF maybe the combination of 3 standards from 3 categories ITAV, OFF and TRON.

The rules of clause 2.1.2 apply to assigning an originator for special case TRFs.

3.8.1 Generating integrated TRFs covering different editions of the same standard

3.8.1.1 In order to efficiently cope with situations where manufacturers target the worldwide market and wish to seek a CB Test Certificate that covers more than one edition of a particular standard (for example IEC 62368-1:2010, 62368-1:2014 and 62368-1:2018), a TRF that includes the requirements from more than one edition may be developed (IECEE CMC/509/RCMC).

a) The structure of the TRF (shown based on the example of 62368-1) will be as follows:
b) Full TRF is always based on the latest standard edition

c) Delta TRFs include the requirements from the previous edition(s).

3.8.1.2 Rules for the preparation of Delta TRFs:

a) If the latest edition has more stringent requirements, the Delta TRF does not need to repeat these requirements.

b) If an alternate or new test method is in the latest edition, the old test method needs to be included in the Delta TRF.

c) The Delta TRF shall always contain more stringent requirements that no longer exist in the latest edition.

NOTE: If there are conflicting requirements in the previous and in the new edition, or when the product cannot meet the more stringent requirements in the new edition, the NCB must use the TRF for the previous edition of the standard. The use of Delta TRFs is not allowed in this case.

3.8.1.3 Proposed wording when completing Delta TRFs:

In case the TRF originator feels that for the clarity of the overall Report, the Delta TRF should contain clauses that are already included in the new edition TRF, the following wording may be used when completing the Delta TRF:

"Compliance with Clause XX of the new edition of the standard fulfils the requirements of this Clause."

3.8.1.4 TRF identification:

The Delta TRF is identified by suffix “delta” added to the TRF reference number according to Clause 3.3.

Example 1: The suffix “delta” added to the “B” version means a TRF, which covers differences between version “A” and version “B” of the corresponding editions of the IEC standard.

3.8.2 Generating integrated TRFs covering two (or more) different standards

3.8.2.1 This type of product combination TRF benefits particular segments of some industries where there is a need to have an identical device complying with more than one IEC or ISO standard.

NOTE: An example within the medical industry includes power supplies, which often need to comply with two safety standards, IEC 60601-1 for MEDICAL products and IEC 60950 or IEC 62368-1 for IT/ITAV products. Typically, these are IT/ITAV equipment and associated power supplies that will need to additionally comply with IEC 60601-1, either due to a specific application, or in consideration of the manufacturer’s desire for broader market access.

3.8.2.2 Product combination TRFs are supplements to the existing TRFs based on a product and not on a single IEC or ISO standard; they may be developed across various categories.

3.8.2.3 When creating a product combination TRF, one standard is selected as the main standard. The selected main standard shall cover the majority of the required tests.

EXAMPLE 2: IEC 60950-1 selected as main standard and supplement TRF for combination with IEC 60065, or IEC 60601-1, or IEC 61010-1.

3.8.2.4 TRF Originator shall identify the most severe requirements in all applied standards and eliminate Clauses that are not applicable to the investigated product.

3.8.2.5 The originator shall identify common requirements to avoid duplication in the supplementary TRF.

3.8.2.6 Any additional requirements that address the use (for example: outdoor use, high altitude use, hospital environment or other application considerations) are to be identified and included in the combination TRF.
3.8.2.7 The combination TRFs shall be so designed that the supplemental Annex can only be used for a specific product it has been prepared for and together with the main standard TRF.

3.8.2.8 Using cross-references, as in the example below, is acceptable.

In a supplement TRF developed to include IEC 60601-1 requirements for product investigated according to IEC 60950-1:

<table>
<thead>
<tr>
<th>Clause</th>
<th>Requirement + Test</th>
<th>Result - Remark</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1.1</td>
<td>Test name (for example input test)</td>
<td>See Test Report for IEC60950-1</td>
<td>Pass</td>
</tr>
</tbody>
</table>

3.8.2.9 To ensure the acceptance of product combination TRFs by Receiving NCBs, the appointment of TRF originator and the distribution of TRF shall follow the OD-2020. Only the approved and officially published product combination TRFs shall be used.

3.8.2.10 The NCBs have an option of using the approved, complete TRFs applicable to the product in question instead of the product combination TRFs.

3.8.3 Generating TRFs combining several Part 2 standards

3.8.3.1 This type of combination TRF may benefit particular segments of the industry where there is a need for a report addressing products combining several features into one appliance within the same product category.

NOTE: Examples of such TRFs within the HOUS category are:
- a washing machine with a spin extractor and tumble dryer (IEC60335_2_4&7&11)
- stationary cooking ranges, hobs, ovens, and deep fat fryers or frying pans (IEC60335_2_6&13)
- a room heater and clothes dryer/towel rail IEC60335_2_30&43.

3.8.4 Generating TRFs covering IEC 60601-1 third edition series of standards, which include Risk Management

3.8.4.1 These TRFs shall include a Risk Management Result Table when:

- the compliance statement in the standard refer to the Risk Management File, and

3.8.4.2 The Risk Management Result Tables should include the following clauses of the appropriate edition of ISO 14971 based on the trigger words used.

<table>
<thead>
<tr>
<th>Trigger word</th>
<th>Clauses of ISO 14971 to be considered</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Risk</td>
<td>4.2 to 6.5</td>
<td>excluding 6.1</td>

</thead>
<tbody>
<tr>
<td>Hazard/ Hazardous Situation</td>
<td>4.2 to 4.4</td>
</tr>
</tbody>
</table>

NOTE 1: The format of the Risk Management Table can be found in Annex E.

NOTE 2: Refer to OD-2044 for further details.

NOTE 3: The TRF for IEC 60601-1:2005/AMD1:2012 includes Risk Management requirements in the check list of the Part 1 TRF. Additional Risk Management tables are not necessary.

### 3.8.5 Generating EMC TRFs

These TRFs shall be prepared using EMC TRF Template OD 2020-F7 and shall always include the Section 1 of the TRF Template OD 2020-F1 (See clause 3.4.1).

Each EMC TRF shall always include “Test Report Index”.

The EMC Template includes green and red text.

- The green text is provided as help for the TRF Originator and shall be deleted by the TRF Originator before the TRF is submitted for publication.
- The red text in the template (and some examples in gray text) is provided as help for the TRF Users. This text includes examples and explanation notes on how to use the template. The red text is to be removed by the TRF User in the final CB Test Report.

See Form OD-2020-F7 for additional details.

### 3.8.6 Generating Cyber Security TRFs

Due to the nature of the Cyber Security investigation, the TRFs for this service are created as two-part documents. The first part of the TRF follows the basic concept of the IECEE TRF and includes all basic information related to product and to the investigation. The second part, which is an integral part of the TRF, is the Compliance Checklist. This checklist uses an Excel spreadsheet to report compliance.

(See clause 3.4.4 for category CYBR verdict exceptions, template OD-2020-F8 and example of IEC 62443-4-4 TRF published on IECEE website).

### 3.9 Example of a Test Report Form

For an example of a TRF see Annex E.

### 3.10 Use of landscape-oriented pages in the TRF

The Test Measurement section of TRF may contain large tables. If it is not practical to continue the table using the “portrait” orientation due to the large size, the table may be designed and printed in the landscape format. An example of a TRF page in landscape orientation is shown in Annex D.

In case of the landscape orientation the margins shall be as follows:

- 3 cm from the top of the table and 2 cm from the bottom, and
- 2 cm left and 2 cm right margin from the table.

In case of the landscape orientation the margins shall be as follows:

### 3.11 Use of abbreviations in the Test Reports

When abbreviations are used throughout the report, they shall be explained.

See examples in see Annex E.
Part 4 – Requests for modifications to TRFs

4.1 General

The use of the most recent TRF template is compulsory for all newly developed TRFs. Previously prepared TRFs for standards that are frequently used by the CB Scheme shall also be updated using the new template, however; there is no need for an immediate update of those TRFs that are infrequently used, unless specifically requested by members.

4.2 Modifications required due to an updated TRF Template

4.2.1 Most of template modifications are administrative in nature and simply reflect new CMC decisions. When the TRF template is modified, the IECEE Secretariat shall request the originators of TRFs to incorporate these modifications within the specified time frame. If this is not practical, the IECEE Secretariat shall allow non-originators to make the updates based on template changes (See clause 4.2.2). In either case, the TRFs need to be formally re-distributed to members.

NOTE: The updates of TRFs may also be used by the IECEE Secretariat to remove from the list of TRFs those forms that are obsolete and no longer in use.

4.2.2 When the originator is not able to provide the updated TRF in the time frame requested by the Secretariat, and there is an urgent need for the updated TRF, another member appointed by the Secretariat can make the updates; however, the process shall be as follows:

- IECEE Secretariat always sends request to the originator after a new template is approved by the CMC and specifies the time frame for completion of the updates.
- If the originator is not able to make that update, the IECEE Secretariat follows clause 4.2.2.1 and the administrative update path in Annex I.

4.2.2.1 Rules for administrative TRF changes:

- No reimbursement for administrative modifications to the TRFs
- The originator remains the same, since this is an administrative update only, unless otherwise agreed with the IECEE Secretariat
- No technical changes to the TRF allowed when update is only based on a new template
- Distribution according to in Annex I (all correspondence with a copy to the originator)

The "Master TRF date" shall be updated to reflect the new publication date of the modified TRF.

NOTE: - In special cases, administrative changes may be combined with technical changes when agreed with the TRF originator and the IECEE Secretariat. For the correct procedure see clause 4.3.

4.3 Requests for technical modifications to published TRFs

Request for technical modifications shall be according to the flowchart in Annex I.

4.3.1 After a new TRF has been developed, the TRF is published on the IECEE website and may be considered "under comments". (See Annex I)

4.3.2 The comment period is maximum 6 months depending on the complexity of the TRF and based on originator’s recommendation. All comments are to be sent to the IECEE Secretariat using form OD-2020-F5.

4.3.3 During the comment period all members can use the TRF without restrictions; however, all users shall be prepared to replace the TRF in their system, should the TRF be modified due to comments received from members and incorporated in the TRF.

4.3.4 Following the 6-months comment period, the originator shall incorporate received comments in the TRF. In case the provided comments cannot be included, the originator informs
members and provides an explanation. In case of a disagreement, members can appeal to WG 9 and ETF, as appropriate. See flowchart in Annex I for details.

NOTE: TRF modification request form is not required when only minor and obvious corrections are needed. The use of the form is recommended when many changes are necessary. However, in all cases, the form helps tracking the implementation of modification requests.

4.3.5 After the modifications/comments provided by members have been incorporated in the TRF, the TRF is considered to be the “final form.” Normally, no additional changes are allowed at this stage (Exception: Only critical issues accidentally overlooked during the 6 months comment period can be processed. See also clause 6.4.

4.3.6 CB Test Reports issued using the preliminary version of TRFs shall be accepted as equivalent to the Test Reports issued using the final version of the TRFs.

4.3.7 The “Master TRF date” shall be the TRF publication date. The publication date will be different for the TRFs published on the IECEE website “under comments” and the final version TRFs. Once the TRF is finalized, the publication date is replaced with the new date, which designates the final version.

4.3.8 Published TRFs that were subject to technical modifications shall be submitted to IECEE Secretariat with the tracking version. The marked-up copy of the TRF should be provided together with the clean TRF in the weekly e-mail of TRF distribution by the Secretariat.

4.4 Requests for corrections to published TRFs

4.4.1 When changes are made to the TRFs by the originator to correct mistakes which are not related to new editions or amendments of the Standard, the originator making corrections must provide a copy of the corrected TRF, which includes Track Changes. The marked-up copy of the TRF should be provided together with the clean TRF in the weekly e-mail of TRF distribution by the Secretariat.

It is the responsibility of the TRF originator to keep track of all corrections until the new TRF version is published.

4.4.2 The Test Report Form Number stays the same until the (publication year/edition has changed or amendments to the Standard have been published, however; the Master TRF date must be changed with each correction.

4.5 Simplified procedure for TRF distribution

The simplified TRF distribution procedure is used when either only the administrative changes to the TRF were made or when TRF updates are due to a simple Amendment or reissue of the IEC standard. The main difference between the regular and simplified distribution procedure is the need for 6-months trial and comment period. In case of the simplified TRF distribution procedure, the TRF is immediately published as the final TRF. The TRF originator shall advise the IECEE Secretariat whether the simplified TRF distribution process is applicable. See also Annex I.

4.6 Updates of the IECEE list of TRFs

Only TRFs that are based on standard (publication year/edition) currently in the scope of the CB Scheme shall remain on the IECEE list of TRFs.

Old versions of the TRFs shall be archived on the IECEE Website, allowing access to a history of old versions of TRFs for reference only. The archived TRFs shall not be used to generate new Test Reports and can be provided by the IECEE Secretariat only upon request to the Secretariat.
Part 5 – Instructions on how to fill in TRFs

The following shall be considered when completing a test report form (TRF):

The standard identified on the first page of TRF including edition and amendments shall match the standard on the CB Certificate to be issued. For examples of completed Test Report pages and instructions on how to complete Test Reports refer to Annex E and Annex F.

The latest TRF version including the latest TRF Master date shall be used. There is a 6-months grace period before the mandatory use of the latest TRF. This grace period applies to those projects that have been started prior to the publication of the new TRF.

NOTE: When previous edition of the standard is still required in any of the participating countries the latest TRF version for that edition shall be selected. The newest available version typically includes corrections necessary for more accurate reporting.

5.1 Modifications to the TRFs

The Test Report Forms shall not be modified.

Adding text in the footer, including watermarks across the pages, modifying test tables (see 5.6.2), adding additional text that is not part of the TRF and can be confusing or annoying when reviewing the reports is considered a modification to TRFs and is not permitted.

However, to protect the environment when printing a hard copy of the Test Report, the whole paragraph with all clauses may be omitted if it is not applicable to the investigated product. See Annex E.

5.2 Completing TRFs

5.2.1 When completing each sub-clause of the TRF, comments indicating why the particular item passed, failed or is not applicable shall be included as necessary for clarity. The Report shall provide sound, sufficient information to grant the certification without the necessity to conduct additional evaluation or testing. Additional specific requirements on how to complete Test Reports are provided in Annex E.

NOTE: Whenever possible and available, the Test Report should also be accompanied by additional information, such as schematics, insulation diagram, test configuration, detailed component information and report on compliance with National Differences.

5.2.2 In addition to identifying the printed name of the signatory and the function, CB Test Reports shall always be signed by the authorized person(s).

NOTE: THE MEANING OF THE WORD “FUNCTION” IN THE TRF IS THE ROLE A PERSON HAS IN THE CB SCHEME PROCESS IN RELATION TO PREPARATION OF CB TEST REPORTS. (SEE E.1.2)

Electronic signatures on the CB Test Report are acceptable provided there is a provision to track internally who is responsible for placing the signature on the CB Test Report. Providing just a printed name does not fulfill the accepted understanding of an electronic signature.

5.3 A blank Test Report consists of four sections

Testing Laboratories shall complete, as a minimum, the required four sections (See 3.4). The Test Report shall include photos (see Annex C). The Report may also contain additional attachments, such as National Differences TRF(s).

5.4 First section of the TRF

5.4.1 The first section (general information) includes a cover page that contains the general information, such as names and addresses of Testing Laboratory and Applicant/Client, testing location, standard used, and copyright and general disclaimer. This page shall be always completed.
5.4.2 Use of logos in the TRF

On the top of the cover page is the IEC/IECEE logo and room for the NCB logo or name. The statement in the top right corner on the first page: “Test Report issued under the responsibility of” references the NCB responsible for the CB Test Report, which will form the basis for the issuance of the CB Test Certificate.

When a Test Report is issued as a CB Test Report; only logos identified above shall be used.

See also Annex E, TRF Cover Page.

NOTE: The name and/or logo of the NCB under the responsibility of which the Test Report is being issued can be placed in the space provided on Cover Page but within a limited fixed size not exceeding 4cm². See also Annex E, TRF Cover Page.

5.4.3 Pages behind the cover page contain: product name, model(s) and rating(s), signature page, testing laboratory information, list of factories (name and address), specific information related to the product under test, marking details, and other general testing and report information.

5.4.4 When using the LTR program, the following cases may apply:

- When the LTR is associated only with the NCB or when LTR is part of a CBTL, the appointed “tutor” CBTL’s address shall be used on the TRF signature section (as opposed to the private address of the LTR or its responsible Local Entity). See OD-2034, Clause 4.3.1.d.

| CB Testing Laboratory .......... : The appointed “tutor” CBTL’s name and address |

5.5 Second section of the TRF

5.5.1 The compliance checklist is the second section of the Test Report formatted into 4 columns. The first two columns titled: “Clause” and “Requirement-Test” are provided for reference only and shall not be modified by the Testing Laboratory. For the complete text of the requirement, testing engineers shall refer to the standard. In case of any discrepancy between the standard and the TRF, the standard text shall prevail.

5.5.2 The next column, called “Result”, needs to be completed as part of the investigation. In this column a measured value or an explanation shall be typed; anything that results from the requirement in column two. The fourth column confirms the compliance, states non-compliance or declares the particular clause as not applicable. The verdicts can be “Pass” (“P”), “Fail” (“F”) or “N/A”. See exceptions in clause 3.4.2.2, and also TRF templates.

5.5.3 Since there are different test case types in a TRF, the Testing Laboratory shall pay special attention to the type of the clause in order to correctly complete the TRF.

5.6 Third section of the TRF

5.6.1 The third section contains tables and may contain special remarks.

Tables are provided to record the actual measurements taken during the test. It is not allowed to use statements such as “OK”, “meets the standard”, “more than”, “less than”, or similar instead of the measured value.

However, CTL agreed with the following alternative report method. In case the measured minimum or maximum value is exceeding or is below the limit value by more than 30%, the value given in the TRF shall be >[minimum required value + 30%] or shall be < [maximum required value - 30%] and the accuracy of the used instruments shall be in line with the latest version of OD-5014, CTL Instrument Accuracy Limits (the latest version).

5.6.2 Tables also provide room for information about test conditions (supplementary information field). When completing measurement tables, traceability of measurement must be ensured. When necessary, table rows can be multiplied, however; adding new tables that are not already part of the TRF, or removing tables is not allowed.
When several models are tested at different parameters an additional row including the table number and the model number can be added. This becomes the unique identifier for the additional table.

If there is no test data in the measurement table and the verdict is N/A that table can be reduced to the header only.

**NOTE:** Examples of measurement tables containing test data for more than one model or when the table is not applicable are shown in Annex E, clause E.1.16.

### 5.7 Fourth section of the TRF

#### 5.7.1 The fourth section contains a dedicated table describing critical components and/or materials.

Where compliance with the standard depends on the use of specific components, such components shall be considered critical, and a **table of critical components** shall be included in the critical components table.

#### 5.7.2 The information to be included in the critical components and materials table shall be based on the following:

- **a)** The CTL clarification: “A safety critical component can only be determined upon a preliminary examination/evaluation of the electrical diagram/design/construction. When the design of the product is such that a determined component, in case of failure, can compromise the safety aspect, this component is defined as “safety critical”.

- **b)** Components, which have specific requirements in the end product standards.

- **c)** Components, which have requirements in the National Standards included in the evaluation.

- **d)** Materials, which are critical to maintain compliance with the standard (such as corrosion requirements, flammability)

- **e)** Professional judgment of the CBTL/NCB.

The evidence used to verify component compliance may be included as an attachment in the CB Test Report or available in the project folder. See also OD-2039 for further instructions.

#### 5.7.3 Reporting IEC/ISO standard information in the Component Table

- **a)** Standards used for testing of components must include the publication year in its reference; (example: IEC 62368-1:2018). When applicable, amendments must be indicated.

- **b)** Providing no publication year and only the IEC/ISO standard number in the reference, is allowed if
  - component license is attached to the report, or
  - component license number and its issue date are provided in the component table, or
  - the statement: “License available upon request” is provided in the table.

**NOTE 1:** Additional information can be provided in the free text field of a Description row. For an example of completed critical components and/or materials table see Annex E, Cl. 1.15.

**NOTE 2:** Recognizing NCBs may request copies of licenses to support their acceptance of CB Test Reports and Certificates, and this could delay the recognition.

### 5.8 Special requirements

#### 5.8.1 Test Equipment List used for CTF Stage 1 or 2

A completed list of test equipment used shall be provided in the CB Test Reports when a Manufacturer Testing Laboratory CTF Stage 1 and Stage 2 has been utilized. The TRF template and Annex E Cl. 1.18 show an example of the equipment list. Other forms with a different layout but containing corresponding information are also acceptable.

**NOTE:** The list of test equipment is optional for CTF Stage 3/Stage 4 procedures, where quality system, verified by the NCB during the assessment, ensures that an appropriate document control process is in place.
5.8.2 Statement of Measurement Uncertainty

Test Report shall include a statement concerning the uncertainty of the measurement systems used for the tests conducted when it is required by the standard, client, or other authorities. This statement shall refer to internal procedures of the laboratory through which traceability of the measuring uncertainty is established. When applicable, the table provided on Page 14 of the TRF Template OD2020-F1 is to be used for reporting U of M. Calculations leading to the reported values are to be on file with the NCB and testing laboratory that conducted the testing.

If client requests or product standard contains the requirement to report U of M for a specific test, the NCBs are free to use their own format and to add additional attachments.

5.9 Attachments to the CB Test Reports

5.9.1 A complete Test Report shall contain an attachment with photos of the product taken according to Annex C, Guide on Use of Photographs in CB Test Reports. Additionally, photographs of the product before and after the test may be required by some standards to record the test set-up.

Special care shall be taken when the end product standard includes requirements for oscillogram, such as for example, short-circuit current or impulse voltage test. When required, the oscillogram shall be added to the test report.

5.9.2 An attachment addressing National Differences may be completed when requested by the Applicant. The National Differences attachment shall have its own numbering of pages with a total number of pages indicated. An example of a completed ND TRF is provided in Annex E.

The “Summary of compliance with National Differences” field in the TRF shall only contain the list of countries for which National and/or Group Differences have been addressed.

A statement regarding compliance with National and Regional standards are not to be listed in CB Test Report under “Summary of compliance with National Differences”. See Annex E, Clause 1.5a) for details.

Any National Differences evaluated for non-member country of IECEE CB Scheme can be included for information only in the GPI section of the Test Report but are not to be listed on CB Test Certificate. (See OD 2037, item 7.1).

5.9.3 According to IECEE 02:2012, Cl. 3.2.2, Test Reports may contain additional attachments, such as product description and other information necessary for identification of the product, additional test data, photographs, schematics, component licenses, and similar.

5.9.4 All attachments shall be listed in the “List of Attachments”. The attachments may be merged into one document and renumbered accordingly.

5.10 CB Test Reports for split testing projects

For the evaluation of a single product to multiple standards, the splitting of testing is allowed according to OD 2037, clause 11. There are two options for preparing CB Test Report.

Since split testing is only allowed for complete standards e.g., Part 1 and Part 2 standards, or standards for different characteristics, (e.g., EMC or E3) then each split testing have its own corresponding TRF. In this case, the split testing covers a full standard and a CBTL must issue a full Test Report for that standard with its own Test Report number. The laboratory responsible for the entire test program and for the complete CB Test Report may include the split testing reports as attachments. The summary of testing must clearly identify the CBTL that conducted split testing.

If all test reports are bundled under one test report, the CBTL compiling that report must have all relevant standards in its scope. That CBTL is then the Main CBTL responsible for the entire test program and for preparing the combined test report. In this case, one test report number may be used, however the summary of testing must clearly identify the CBTLs that conducted the split testing.

Disclaimer: This document is controlled and has been released electronically.
Only the version on the IECEE Website is the current document version.
Part 6 – Instructions on how to prepare amendment reports

6.1 General

An Amendment Report can only be issued to the original CB Test Report. The Amendment shall state that it is not valid without the original CB Test Report. The original Test Report reference number shall be clearly identified in the Amendment to allow for logical tracking of product changes.

The Amendment Report shall be prepared using the latest available TRF based on the same version of the standard as the one used for the original CB Test Report. The original Test Report remains unchanged.

NOTE: This means that the TRF template used for the original test report and the template used for the amendment could be different versions and/or master dates.

Amendment Reports to the original CB Test Report can be issued to change or include but not limited to the following:

a) applicant name/address changes
b) manufacturer name/address change
c) factory location name/address changes (See OD-2037)
d) changes in model/type designation
e) addition of the similar new models/types; - (if none or limited testing is required)
f) changes/corrections to electrical rating; - (if none or limited testing is required)
g) product modifications - (if none or only limited testing is required)
h) new/alternate components added; - (if none or only limited testing is required)

Adding new or alternate components is always considered technical modification, even if component meets the criteria outlined in OD-G-2060 for interchangeable components or if based on review it is determined that no additional testing is required.

6.2 Type of changes to CB Test Reports

The following changes to CB Test Reports are allowed:

a). Amendment Report due to technical modification to the originally tested products (See IECEE 02, Clause 3.2.4 and for CB Certificate OD 2037, clause 3.2)
b). Amendment Report due to administrative modification (See IECEE 02, Clause 3.2.4 and for CB Certificate OD 2037, clause 3.3).
c). Corrections (for CB Certificate see OD-2037, clause 3.3 and 3.4)

6.2.1 Amendment Report due to technical modification

It may be necessary to modify the information contained in a CB Test Report several times. However, if these modifications that are due to technical changes to the certified product(s) they are limited to maximum three, after which a new CB Test Report (note: and CB Test Certificate) shall be issued. This shall not preclude issuing a new CB Test Reports (note: and Certificates) for every technical modification, if the NCBs and the Applicant wish to do so.

NOTE 1: It is recommended, however, that for extensive product modifications requiring testing, a new CB Test Report be issued, even if less than three technical modifications were previously processed.

NOTE 2: The allowed three technical modifications are related to the Test Report and not to the individual models covered by the same Report. The restriction to not allow more than three technical modifications is due to difficulties with review of reports covering considerable number of changes when reports are submitted for Recognition.

Engineering judgment can be used regarding the issue of a new CB Test Report versus an Amendment Report; however, upgrading a CB Test Certificate and Report from an old edition of the standard to a newer edition of the standard requires issuing a new CB Test Report and a new CB Test Certificate (see OD 2037, clause 3.1). The appropriate TRF, matching the new edition
or amendment of the applied standard, shall be used. An Amendment Report is not allowed in this case.

6.2.2 Amendment Report due to administrative modification

Typically, Amendment Reports address changes as specified in 6.1, items a), b), c), d) or similar where no engineering judgment about product compliance is required. There is no limit on the number of allowed administrative modifications.

6.2.3 Corrections

Corrections can cover misprints and typo errors. They are not used to address technical modifications to the product or administrative modifications. Once corrections are processed client/applicant may simply replace the affected pages in the original Test Report. (In order to be traceable, the corrections shall have the date of correction typed on the corrected page). There is no limit on the number of allowed corrections.

Additional information about the replaced pages may be included in the “General Product Information” section of the Report.

6.3 Identification of changes to CB Test Reports

6.3.1. A CB Amendment Test Report shall clearly identify the nature of modifications under the General Product Information section of the TRF, as applicable.

6.3.2. All changes made to the original Test Report shall be clarified and conducted tests stated in the Summary of tests.

NOTE: For example, if new models are being added, explain the differences and similarities between models and indicate tests that were performed or why tests were not performed.

6.3.3. Each Amendment Report shall contain its own “General information section”, which shall be reproduced from the original Report with the necessary changes. If applicable, additional pages containing revised clauses/sub-clauses and modified test tables for conducted tests shall be included in the Amendment, Other pages (such as photos, schematics, manuals) that are affected by the product modifications shall be appended.

6.3.4 All pages included in the Amendment Report shall be marked with the correct identifier for traceability (e.g., Report Ref. number and the date when the changes to the original Test Report were made).

6.4 Amendment Report example

For an example of an Amendment Report refer to Annex F.

NOTE: For illustration purposes, only a few completed pages from an Amendment Report are shown.

The provided example shows Amendment No. 2 Report that has been issued due to the technical modification to the product (new critical components were added, the size of enclosure was changed, and limited testing was performed. However, the original Test Report was already modified once by Amendment 1 Report, which has been issued because new models were added. In this case, after engineering review of the differences and similarities between originally tested models and new models, no tests were considered necessary. In the provided example, the history of all changes and the reasons why the Amendment Reports have been issued are clearly documented. Either the entire history of changes is repeated in each subsequent Amendment Report or only the changes specific to the new Amendment Report are provided.

In the given example, after one more technical modification to the products, a new CB Test Report will be issued. For the reissued Test Reports, construction review and the necessary testing will need to be completed.
6.5. Issuing a CBTR and CBTC over another CBTC

6.5.1. When issuing a new CBTR/CBTC over another CBTR/CBTC (originally issued by the NCB “1”) the following conditions of recognition by the NCB “2” shall be followed and documented in the Test Report:

For the NCB “2” to accept the CBTR/CBTC issued by the NCB “1” for its own CB Certification, the Applicant shall provide all relevant details obtained from the NCB “1” for the CBTR/CBTC in question. The NCB “2” shall arrange for:

- Obtaining a sample(s) and performing a construction review
- Performing any additionally required testing, which needs to address new requirements (e.g., new edition of a standard, national differences, etc.) or to address and evaluate changes made to the product since the last evaluation.
- Recording the necessary information in the new CB Test Report. The source of the original test data from the NCB “1” shall be identified in the new CB Test Report prepared under the responsibility of the NCB “2” (In accordance with the ISO/IEC 17025 clause, addressing “Technical records”).

6.5.2. The information about the source of the original test data shall be provided in the section “Summary of testing.” The date when sample was received for construction review shall be recorded in the “Date of receipt of test item” field. Additional clarification may also be provided in the “General Product Information section.”

NOTE 1: The extent of retesting or further partial testing, such as selected clauses of the relevant standard(s), should be up to the professional judgment of the NCB “2” as there can be various cases and each case may require a particular approach.

NOTE 2: As a minimum, the product is required to go through a construction review and any further partial testing deemed appropriate in the judgment of the NCB “2” to fully cover any modifications to the product or according to a new edition of a standard, National Differences, etc.

NOTE 3: Since some tests may influence the tests that follow, the sequence of tests must always be considered.
Annex A - Void (Reserved for future use) Helpful hints for TRF originators

**Important Note:**

The Text Form Fields are the legacy field types that were available in earlier versions of Word 97–2003. You can continue to use them in Word 2007–2013, and you **must** use them for forms to be saved in Word 97–2003 format.

1. In order to add an automatic update for all fields containing the same information, for example the Report Ref. Number, follow these instructions:

**MS Word 2000-2003**

From the View Menu select Toolbars and enable the Forms Toolbar

Click in your Word document wherever you wish to insert a Form Field.

On the Forms Toolbar click on the first button to insert a Form Field into your document:

A Text Form Field will be inserted at the cursor location.

Go to page 3 of this document.

**MS Word 2007**

Click on the Menu button and select Word Options

In the Popular section, select Show Developer Tab in the Ribbon

Click in your Word document wherever you wish to insert a Form Field.

On the Developer Menu select the Legacy Tools icon which is in the Controls section

On the Legacy Forms menu click the first icon to insert a Form Field.

A Text Form Field will be inserted at the cursor location.

**Important Note:**

In Word 2007–2013, the document **must be saved as “Word 97-2003 Document”**

Go to page 3 of this Annex.

**MS Word 2010/2013**

Click the File

Click the Options button at left bar

Click the Customize Ribbon button at left bar

Locate the “Developer” on the right side, and please check it and click OK.
Click inside your Word document, wherever you wish to insert a Form Field. 
Click on the Developer tab. 
On the Developer tab, click on the Legacy Tools button:

**Word 2013**
Word-2010

Click on the Text Form Field button

A Text Form Field will be inserted at the cursor location.

Important Note:
In Word 2007-2013, the document must be saved as “Word 97-2003 Document”

Go to page 3 of this document.

All versions of the MS-Word

Double click on the newly created Text Form Field to open the Text Form Field screen:

Type Bookmark name CP1 (use name CP1 for the Report Reference No. for consistency).
Type Report Ref. No. in the “default text field” and click OK.
Move cursor to any space where normally the Report Reference No. should be typed (normally in the header).

Disclaimer: This document is controlled and has been released electronically. Only the version on the IECEE Website is the current document version.
**MS-Word-2000-2003**

Select “Insert” field, “Links and References” and “Ref.” Then type CP1 and click OK.

![Field dialog box](image)

**MS-Word-2007-2013**

From the MENU bar:
Select INSERT
Click on the Quick Parts
Click on the Field
Under “Field Names” click on Ref
Under “Bookmark Name” click on CP1
Click OK.

**All versions of the MS-Word**

If you have several sections with different headers and page layout in the TRF you may need to repeat these steps for each section.

To use the update field feature, go to the Text Form Field. Double-click on the field, type the information (such as Report Ref. No.) in the “default text field” and click OK.

On each page of the printed document MS-Word will automatically enter the text from the “default text field” into the selected locations with the REF CP1 identification.
2. In order to add a dotted leader for test cases requiring a specific result or comment in addition to the verdict, follow these instructions:

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement—Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>20.5</td>
<td>Length \geq 10 m</td>
<td>12.5</td>
<td>Pass</td>
</tr>
</tbody>
</table>

Move cursor to the second cell ("Requirement—Test") and:

**MS Word 2000-2003**

Click Format then select Tabs.

![Tab dialog box](image)

**MS Word 2007-2013**

Click Page Layout, and then click the Paragraph Dialog Box Launcher.

![Paragraph dialog box](image)
Click on the **Tabs...** button.

**Tab stop position:**
- Default tab stops: 0.5"

**Alignment:**
- Left
- Center
- Right

**Leader:**
- None
- 1........
- 2........
- 3........
- 4........
All versions of the MS Word

In the “Tab stop position” type 6.7 cm (or as appropriate for the size of the table and cell).
Set the alignment on “left”.
Select the leader No. 2.
Click on “Set” and then OK.

While still in the second cell, move cursor to the end of text in this cell and press “Control” + “Tab”. Add the “:” symbol.

3. In order to add shading in the cell, place cursor in that cell.

MS Word 2000-2003

Select Format, Borders and Shading.

Click on the “Shading” tab and choose the top square for the 12.5% Grey.
You may also select Patterns, Style and 12.5% for the shading. This method appears to work better during the conversion from MS Word 6.0 to higher versions of MS Word (the shading is not lost).

Important Note: Do not select Styles in Patterns. Leave it clear.
**MS Word 2007-2013**

Select HOME, click on the arrow at the Borders icon and select ‘Borders and Shading’.

Select Patterns, Style and 12.5% for the shading.
Annex B – Void (Reserved for future use)
Annex C — Guide on use of photographs in CB Test Reports

Contents

C.1 General requirements ................................................................. 3
C.2 Specific requirements ................................................................. 3
C.3 Photographs to be taken ............................................................... 3
C.4 Storage and distribution ............................................................... 4

C.1 General Requirements

CB test reports shall include photographs of the test sample. Photographs are required for modified reports only when the photographs provided with the original test report are no longer representative of the product covered by the addendum report. Sufficient photographs shall be taken to clearly identify the test sample and its components as well as safety relevant design details. The photographs shall be suitable to fulfil also the requirements of OD-4002 (PID) and shall show the finally certified sample as reference for the factory inspection.

The CB test report shall clearly identify the product shown in the photographs (manufacturer, model number, type designation, etc.) by either labelling the photographs with the product identification or including the product identification in references to the photographs in the text of the report.

C.2 Specific requirements

The number of photographs will depend on the complexity of the test sample. A minimum number of 2 exterior and 2 interior photographs is preferred, where practical.

If printed in a test report, the preferred format is not more than 2 photographs on each page.

The quality of the photographs and prints shall be such that all necessary features can be clearly identified.

The photographs may include a ruler to show proportion.

Note: Scaling of dimensions from photographs should not be done.

It is recommended that the background is a colour that contrasts with the features of the test sample.

It is recommended that the camera be tripod mounted.

Lighting should be arranged to minimize shadows.

Color photographs are required with a minimum resolution of 800x600 dpi.

C.3 Photographs to be taken

The photographs shall clearly identify the tested product including the safety critical components listed in the CB test report.

The following views are recommended:

- External view of the assembled product (or component where a component is being tested) showing different views including the front, rear, top and base. One photograph may show more than one side.
- Marking, warning and designation labels, if a copy of the original is not part of the report.
- Labelling of controls and indication lights.
- Internal construction including safety critical features.
- Supply terminations and cord anchorage.
- Earthing connections.
- Printed circuit boards critical to product safety—component side.
- Printed circuit boards critical to product safety – solder/pattern side.
- Details of safety critical components, both electrical and mechanical.
- Detachable parts critical to product safety.

Additional photographs and special features:

- Where a range of products has been tested, use photographs to show the different versions.
- Where modifications have been made show the details in the photographs.
- Special features, such as a marginal creepage distance, should be detailed. Use arrows or other visual aids to clearly identify special features.

C.4 Storage and distribution

It is preferred that a printed copy of the photographs is included with each printed copy of the CB test report. As an alternative, a CD with the photographic image files may be included with the printed report.

If the CB test report is issued electronically, then, electronic file copies of the photographs shall be included with the electronic file copy of the report.

It is recommended that the file for the photographs (in the report or on CD) is in secure format.

PDF format recommended.

</table>

*Always consult OD 2048, Annex B for signing rules and limitations.*
E.1.2a Signatures

Example of signatures – See clarification in cl. 5.2.2. where English text is required

| Responsible Testing Laboratory (as applicable), testing procedure and testing location(s): |
| CB Testing Laboratory: |
| Testing location/address: |
| Tested by (name, function, signature): John Smith, Project Handler |
| Approved by (name, function, signature): Alan Loong, Senior Technical Expert |
| 约翰·史密斯 |
| 梁家傑 |

E.1.2b CB Testing Laboratory name and testing locations

Since the NCB is fully responsible for monitoring of the CB Scheme projects, the NCB may assigned testing to more than one qualified testing location when necessary (Subcontracting according to OD 2012, testing to specialized part 2 standards, witness testing at CTF and similar situations). All locations must be identified in the Test Report (see cl. E.1.4 below), however; the NCB must appoint one CBTL responsible for compiling the complete CB Test Report. The name of the responsible CBTL is identified on Page 1 in the field “Name of Testing Laboratory preparing the Report”.

E.1.3 List of attachments

The list below includes typical examples of attachments:

a) Photo (x pages) - required
b) National Differences (xx pages) – when applicable
c) Other attachments as needed

List of Attachments shall include a total number of pages in each attachment.

E.1.4 Summary of testing

In case when it is clear where the tests were performed it is not necessary to list all tests and the following wording examples can be used:

"All applicable tests as described in the compliance checklist were performed at ...."

“Tests in clauses x and z were conducted at ..... all other applicable tests were performed at ....”

The general reason why any of the normally applicable tests were not conducted shall be explained in the “General product information “field or in “Summary of testing”.

It is important to clarify the differences between models covered by the Report when testing a family (series) of products.
### Summary of testing:

<table>
<thead>
<tr>
<th>Tests performed (name of test, test clause and date test performed)</th>
<th>Testing location: (CBTL, SPTL, CTF, Subcontractor)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Provide information about tests conducted, name of test, test clause and date test performed</td>
<td>Provide information on testing location (CBTL, SPTL, Client’s laboratory, Subcontractor’s laboratory and split testing when allowed and used)</td>
</tr>
</tbody>
</table>

### E.1.5a) Summary of compliance with National Differences (List of countries addressed):

**Summary of compliance with National Differences (List of countries addressed):**

Complete as appropriate by listing countries that have been addressed.

- **The product fulfills the requirements of _________** (insert standard number and edition and delete the text in parenthesis, leave it blank or delete the whole sentence, if not applicable)

- **IECEE Member countries that are also CENELEC members**
  - Compliance with Group Differences evaluated  ☐ yes ☐ No ☐ N/A

- **IECEE Member countries with published National Differences which were evaluated:**
  - Insert countries (ISO codes) or N/A

- **IECEE Member countries that did not declare any National Differences:**
  - Insert countries (ISO codes) or N/A

To support the statement of compliance with published National Differences, attach a compilation of relevant ND and/or GD TRFs to the CB Test Report.

- **The product fulfills the requirements of _________** (insert standard number and Year of publication, and delete the text in parenthesis, leave it blank or delete the whole sentence, if not applicable)

### E.1.5b) Statement concerning the uncertainty of the measurement systems used for the tests:

This section should be completed when a statement concerning the uncertainty of the measurement is required by the product standard or client. Select applicable case and provide required information.

**Use of uncertainty of measurement for decisions on conformity (decision rule):**

Disclaimer: This document is controlled and has been released electronically. Only the version on the IECEE Website is the current document version.
No decision rule is specified by the IEC standard, when comparing the measurement result with the applicable limit according to the specification in that standard. The decisions on conformity are made without applying the measurement uncertainty ("simple acceptance" decision rule, previously known as "accuracy method").

Other: ... (to be specified, for example when required by the standard or client, or if national accreditation requirements apply)

Information on uncertainty of measurement:
The uncertainties of measurement are calculated by the laboratory based on application of criteria given by OD-5014 for test equipment and application of test methods, decision sheets and operational procedures of IECEE.

IEC Guide 115 provides guidance on the application of measurement uncertainty principles and applying the decision rule when reporting test results within IECEE scheme, noting that the reporting of the measurement uncertainty for measurements is not necessary unless required by the test standard or customer.

Calculations leading to the reported values are on file with the NCB and testing laboratory that conducted the testing.

E.1.6 Copy of marking plate

Include a copy of marking plates of all models included in the type testing showing model designation, rating, manufacturer, and other information, as appropriate and/or required in the standard. If samples were selected representing the entire range of models included in the type testing, marking plates of the representative models are to be provided. For a series of models, a reduced number marking plates may be acceptable as long as there is sufficient information in the report to reconstruct the information for all required marking plates.

NOTE 1: See OD-2041 for examples of product families and sample selection criteria.

If the marking plate artwork contains certification marks, the use of these certification marks on the actual product must be authorized by the respective NCBs. The following statement shall be included in the “Copy of marking plate” field of the Test Report:

“The artwork below may be only a draft. The use of certification marks on a product must be authorized by the respective NCBs that own these marks”

Unless otherwise specified in the respective product standard marking shall be of permanent type.

NOTE 2: Marking provided as an “electronic paper” is not acceptable as it relies on the supply of power to be viewed.

E.1.7 Test items particulars

Provide information about the product needed to establish a correct test program, such as product mobility, type of power connections, and similar.

Select information applicable to the product, add values provided in technical documentation.

An example of “Test item particular” section:

<table>
<thead>
<tr>
<th>Test item particulars</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Classification of installation and use</td>
<td></td>
</tr>
<tr>
<td>Supply Connection</td>
<td></td>
</tr>
</tbody>
</table>
E.1.8  Possible test case verdicts

Test case does not apply to the test object:  N/A

Test item does meet the requirement:  Pass (P)

Test item does not meet the requirement:  Fail (F)

NOTE: The verdict may be spelled out (Pass, Fail) or abbreviated (P, F). No abbreviation is used for N/A verdict. See also sub-clause 3.4.2.2., Results and verdicts, for the exception used in MED category for collateral standards and in category CYBR.

E.1.9  Testing dates

<table>
<thead>
<tr>
<th>Testing</th>
<th>Complete as appropriate (YYYY-MM-DD)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date of receipt of test item</td>
<td>Complete as appropriate and when required by the test procedure used.</td>
</tr>
<tr>
<td>Date (s) of performance of tests</td>
<td></td>
</tr>
</tbody>
</table>

NOTE: Date(s) of performance of test may be a time frame “from – to” or the last day of testing. Additional details should be in Summary of Testing table.

E.1.10  General Remarks

The text below shall not be modified, except as noted.

General remarks:

"(See Enclosure #)" refers to additional information appended to the report.
"(See appended table)" refers to a table appended to the report.

Throughout this report a ☐ comma / ☐ point is used as the decimal separator.

☐ This Test Report Form contains requirements according to IEC/ISO .......... Standard dated ...... and includes Corrigendum dated ......

(Note: The above text maybe removed if not applicable)

Select whether a point or comma is used as the decimal separator.

Provide information about Corrigendum, when used.

Note 1: List of test equipment must be kept on file and be available for review.

Note 2: The General remarks section may also contain the instructions for TRF use, such as the example below:

This Test Report Form is intended for the investigation of (product) in accordance with IEC/ISO 6xxxx-2-xx. It can only be used together with the IEC/ISO 6xxxx Part 1: 20xx Test Report.

Note 3: For TRFs that combine Part 1 and Part 2 requirements into a one Test Report Form, this statement is not applicable.

E.1.11  Manufacturer’s Declaration per subclause 4.2.5 of IECEE 02

When the application for obtaining a CB Test Certificate includes more than one factory location, the Applicant shall include a declaration from the Manufacturer(s) stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory (Subclause 4.2.5, IECEE 02).
Manufacturer's Declaration per sub-clause 4.2.5 of IECEE 02:

The application for obtaining a CB Test Certificate includes more than one factory location and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided ................................................................. :

Yes  Not applicable

Select “Yes” when more than one factory is listed on the CB Test Certificate or “Not applicable” when only one factory is used.

When differences exist; they shall be identified in the General product information section.

Name and address of factory (ies) ................. :

When differences between products from various factories exist, they shall be identified in the General product information section.

E.1.12 Name and address of factory/factories

The CB Test Report shall include the name and address of each factory in the designated area of the TRF.

E.1.13 General Product Information and other remarks:

This section is optional, except when additional information is necessary for acceptance of CB Test Report.

In this section provide product information, intended use, explanation of the test program, model differences, differences between products from different factories, and similar information, as needed.

When applicable, provide the rationale for selection of samples for testing. The test report shall provide clear description and selection criteria of the models tested representing the “family range”.

NOTE: It is not necessary to explain sample selection, when sample selection is already addressed by the standard.

Additional examples of information that should be included in this field:

1. The reason why any of the applicable tests were not conducted shall be explained.
2. Definition of variables used in the type/model designation

For new Test Reports the following may be useful:

- Detailed product information
- Type of product
- Intended user (whether initial training is necessary)
- Intended operating environment (if different from normal/typical as defined by the standard)
- Readiness for use (end product, sub-assembly, or component)
- Accessories
- Modules and interconnection (if equipment under test is of a modular design)
- Other aspects as highlighted by the corresponding standard.
For modifications to the existing Test Reports the following may be useful:

- Clear explanation of the nature of such modifications should be as required by clause 6.2.
- Identification of product changes, preferably in comparison to the original model tested.

See also Part 6 of this OD.

E.1.14 Different test cases and clause types require different type of input

Types of Clause in a TRF:

**Heading:**

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement - Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>30.</td>
<td>CONSTRUCTION</td>
<td></td>
<td>Verdict optional</td>
</tr>
</tbody>
</table>

Verdict recommended but can be omitted when all verdicts in related sub-clauses are provided.

**Sub-heading:**

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement - Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>10.5</td>
<td>Markings for Class II appliances:</td>
<td></td>

</tr>
</tbody>
</table>

**Test case types:**

Regular test cases

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement - Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>21.1.1</td>
<td>Marking on main part</td>
<td>Result/comment optional</td>
<td>Verdict required</td>
</tr>
</tbody>
</table>

When regular test case requires a specific result or comment in addition to the verdict, it is indicated by a dotted leader as in the example below. In this case both, the comment (or measured value) and verdicts are required.

<table>
<thead>
<tr>
<th>Cl.</th>
<th>Requirement - Test</th>
<th>Result</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>20.5</td>
<td>Length ≥ 10 m ..........</td>
<td>Result/comment required</td>
<td>Verdict required</td>
</tr>
</tbody>
</table>

A shaded verdict field identifies Auxiliary test case, not requiring a verdict but additional information only. In this case the verdict is not needed only the result shall be provided.

<table>
<thead>

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Supplementary information
Motor Model 234 tested at 220 V and in the range of ambient temperature of 22°C-25°C
Motor Model 4566 tested at 120 V and at 40°C

**NOTE 2:** Two examples that ensure traceability of measurements when completing a measurement table for multiple models are shown above.

**Note 3:** For a table which includes many models and is spreading across multiple pages, it is recommended that the header of the table is repeated on each page.

Optional: When several models are tested at different parameters it is allowed to add an additional row which should include the table number and the model number. This row becomes unique identifier for additional table. Adding new table that is not already part of the TRF or removing table is not allow, however; reducing the size of tables per E.1.18 is permitted.

Example of duplicated tables:
TRF includes TABLE 19.7 Abnormal operations, locked rotor/moving parts. Additional will be identified as TABLE 19.7 -Model ACB-1

<table>
<thead>
<tr>
<th>19.7</th>

NOTE 4: An example of Risk Management Table referring to the documents identified in the Risk Management File. Refer to OD-2044 for further details.

E.1.17 Additional options

When completing the Test Report for a product for which the whole chapter of the standard is not applicable due to the nature of the product then, as an option, only the chapter’s header may be printed in the final Report. (For example, modems and electric pencil sharpeners fall under the scope IEC 60950-1. The telecommunication requirements apply to a modem but are irrelevant for electric pencil sharpener.)

The same concept can apply to the measurement tables. See examples below.

For pencil sharpener the Test Report checklist may look as in the example below:

<table>
<thead>
<tr>
<th>Clause</th>
<th>Requirement + Test</th>
<th>Result- Remark</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>6</td>
<td>CONNECTION TO TELECOMMUNICATION NETWORKS</td>
<td>N/A</td>
<td></td>
</tr>
</tbody>
</table>

NOTE 1: Example based on the TRF for IEC 60950 (3rd Edition). Clauses 6.1 through 6.3 are not printed.

For additional clarity, the header may also be followed by a supplementary note.

<table>
<thead>
<tr>
<th>Clause</th>
<th>Requirement + Test</th>
<th>Result- Remark</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>6</td>
<td>CONNECTION TO TELECOMMUNICATION NETWORKS</td>
<td>N/A</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Telecommunication requirements not applicable to the evaluated product.</td>
<td>—</td>
<td></td>
</tr>
</tbody>
</table>

If there is no test data in the measurement table and the verdict is N/A that table can be reduced to the header only.

<table>
<thead>
<tr>
<th>Clause</th>
<th>Requirement + Test</th>
<th>Result- Remark</th>
<th>Verdict</th>
</tr>
</thead>
<tbody>
<tr>
<td>16.1</td>
<td>TABLE: Overload Protection of Transformers and Associated Circuits</td>
<td>N/A</td>
<td></td>
</tr>
</tbody>
</table>

16.1 | **TABLE: Overload Protection of Transformers and Associated Circuits** | N/A
---|---|---
Overload Protection of Transformers and Associated Circuits not applicable to the evaluated product | N/A

### E.1.18 List of test equipment used

A completed list of used test equipment shall be provided in the Test Reports when a Customer’s Testing Facility according to CTF stage 1 or CTF stage 2 procedures has been used.

This page may be removed when CTF stage 1 or CTF stage 2 are not used. See also TRF Template.

<table>
<thead>
<tr>
<th>Clause</th>
<th>Measurement / testing</th>
<th>Testing / measuring equipment / material used, (Equipment ID)</th>
<th>Range used</th>
<th>Last Calibration date</th>
<th>Calibration due date</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## Annex E2 — National Differences section

### E.2.1 Completing TRFs based on Template OD 2020-F2

**NOTE 1:** Provided example is based on the template OD 2020-F2:2017 ed. 1.0. It shows Group/CENELEC Common Differences and may also include EU National Differences and Z-Annexes. The attachment addressing National Differences may be a merging of selected National and Group Differences TRFs into one document with correctly numbered pages.

**NOTE 2:** See clause E2.3 for Ed. 1.2 template cover page changes

### ANNEX ZA (NORMATIVE)

#### SPECIAL NATIONAL CONDITIONS

**Norway**

19.5 The test is also applicable to appliances intended to be permanently connected to fixed wiring

22.2 The second paragraph of this subclause, dealing with single-phase, permanently connected class I appliances having heating elements, is not applicable due to the supply system

### ANNEX ZB (INFORMATIVE)

#### A-DEVIATIONS

**Ireland**

25.6 These regulations apply to all plugs for domestic use at a voltage of not less than 200 V and in general allow only plugs complying with I.S. 401:1997, or equivalent, to be fitted to domestic appliances

**United Kingdom**

25.6 These regulations apply to all plugs for domestic use at a voltage of not less than 200 V and in general allow only plugs to BS 1363 to be fitted to domestic appliances. It also allows plugs to BS 4573 and EN 50075 to be fitted to shavers and toothbrushes

---

Copyright © 2023 IEC System of Conformity Assessment Schemes for Electrotechnical Equipment and Components (IECEE System). All rights reserved.

This publication may be reproduced in whole or in part for non-commercial purposes as long as the IECEE is acknowledged as copyright owner and source of the material. IECEE takes no responsibility for and will not assume liability for damages resulting from the reader's interpretation of the reproduced material due to its placement and context.

If this Test Report Form is used by non-IECEE members, the IECEE/IEC logo and the reference to the CB Scheme procedure shall be removed.

This report is not valid as a CB Test Report unless signed by an approved IECEE Testing Laboratory and appended to a CB Test Certificate issued by an NCB in accordance with IECEE 02.

General disclaimer:

The test results presented in this report relate only to the object tested. This report shall not be reproduced, except in full, without the written approval of the Issuing NCB. The authenticity of this Test Report and its contents can be verified by contacting the NCB, responsible for this Test Report.
An Amendment Report can only be issued to the original CB Test Report. The Amendment shall state that it is not valid without the original CB Test Report. The original Test Report reference number shall be clearly identified in the Amendment to allow for logical tracking of product changes.

| Test item description .................. | Describe the product (computer, modem, hand-held lamp, electric oven, electric screwdriver…). Use IEC/ISO standard terminology. |
| Trademark ............................. | Describe or paste a copy of the trademark used |
| Manufacturer .......................... | Type name and address of the manufacturer (See IECEE Definitions, item 8) |
| Model/Type reference ................. | Type, model, type reference as it appears on the marking plate |
| Ratings ............................... | Provide rating values corresponding to the ratings on which the testing has been based and as identified on the marking plate |

**Responsible Testing Laboratory (as applicable), testing procedure and testing location(s):**

Select applicable program below and identify testing location. Consult OD 2048, Annex B for additional details about signatories. Tests conducted by SPTL shall be listed accordingly, in the “Summary of testing.” For reporting the use of LTR procedure, see Cl. 4.4.4.

- [ ] CB Testing Laboratory:
  - Type name of the responsible CB Testing Laboratory
  - Testing location/ address .................: Type address of the CB Testing Laboratory
  - Tested by (name, function, signature) ..... : Type name & function
  - Approved by (name, function, signature) : Type name & function

- [ ] Testing procedure: CTF Stage 1:
  - Type name of CTF Stage 1 Laboratory
  - Testing location/ address .................: Type address of CTF Stage 1 Laboratory
  - Tested by (name, function, signature) ..... : Type name* of CBTL staff or LTR & function
  - Approved by (name, function, signature) : Type name* (CBTL/LTR) & function

- [ ] Testing procedure: CTF Stage 2:
  - Type name of CTF Stage 2 Laboratory
  - Testing location/ address .................: Type address of CTF Stage 2 Laboratory
  - Tested by (name + signature) ............. : Type name* (CTF Staff) & function
  - Witnessed by (name, function, signature) : Type name* (CBTL/ LTR or NCB) & function
  - Approved by (name, function, signature) : Type name* (CBTL/ LTR or NCB) & function

- [ ] Testing procedure: CTF Stage 3:
  - Type name of CTF Stage 3 Laboratory
  - Testing location/ address .................: Type address of CTF Stage 3 or 4 Laboratory
  - Tested by (name, function, signature) ..... : Type name* & function, (CTF)
  - Witnessed by (name, function, signature) : Type name* & function, (NCB, CBTL or LTR when tests were witnessed)
  - Approved by (name, function, signature) : Type name* (CTF Stage 3), or NCB, CBTL or LTR & function

- [ ] Testing procedure: CTF Stage 4:
  - Type name of CTF Stage 4 Laboratory
  - Testing location/ address .................: Type address of CTF Stage 3 or 4 Laboratory
  - Tested by (name, function, signature) ..... : Type name* & function, (CTF)

*Always consult OD 2048, Annex B for signing rules and limitations.
List of Attachments (including a total number of pages in each attachment):
This Amendment Report, Ref. No. TR-12345B to the original Report Ref. No. TR-12345 contains x Report Pages and a new photograph.
See also E1.3

Summary of testing:

<table>
<thead>
<tr>
<th>Tests performed (name of test, test clause and date test performed):</th>
<th>Testing location: (CBTL, SPTL, CTF, Subcontractor)</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Provide information about testing conducted for this Amendment Report, as appropriate.). For example: Clause 4.11 - Input test</td>
<td>Provide information on testing location (CBTL, SPTL, Client’s laboratory, Subcontractor’s laboratory, and split testing when allowed and used).</td>
</tr>
<tr>
<td>Clause 11 - Heating test Include date the test was performed.</td>
<td></td>
</tr>
</tbody>
</table>

Summary of compliance with National Differences (List of countries addressed):

Instruction: Provide information about verified compliance with National Differences requirements.
In case of technical modifications to the product, state if modified products still comply with previously evaluated National Differences. Complete as appropriate. See also E1.5a.

☐ The product fulfills the requirements of __________ (insert standard number and edition and delete the text in parenthesis, leave it blank or delete the whole sentence, if not applicable)

Instruction: In case of technical modifications to the product, state whether modified products still comply with previously evaluated National or Regional standards.

Summary of compliance with National Differences
Include only National Differences evaluated and declared by member countries of IECEE CB Scheme. Non-member countries or national or regional standards can be included for information in the General Product Information section of the Test Report but will not to be listed on CB Test Certificate. (See OD 2037, item 7.1).

- IECEE Member countries that are also CENELEC members
  Compliance with Group Differences evaluated ☐ yes ☐ No ☐ N/A

- IECEE Member countries with published National Differences which were evaluated:
  Insert countries (ISO codes) or N/A

- IECEE Member countries that did not declare any National Differences:
  Insert countries (ISO codes) or N/A

To support the statement of compliance with published National Differences, attach a compilation of relevant ND and/or GD TRFs to the CB Test Report.
Use of uncertainty of measurement for decisions on conformity (decision rule):

☐ No decision rule is specified by the IEC standard, when comparing the measurement result with the applicable limit according to the specification in that standard. The decisions on conformity are made without applying the measurement uncertainty (“simple acceptance” decision rule, previously known as “accuracy method”).

☐ Other: … (to be specified, for example when required by the standard or client, or if national accreditation requirements apply)

Information on uncertainty of measurement:
The uncertainties of measurement are calculated by the laboratory based on application of criteria given by OD-5014 for test equipment and application of test methods, decision sheets and operational procedures of IECEE. IEC Guide 115 provides guidance on the application of measurement uncertainty principles and applying the decision rule when reporting test results within IECEE scheme, noting that the reporting of the measurement uncertainty for measurements is not necessary unless required by the test standard or customer. Calculations leading to the reported values are on file with the NCB and testing laboratory that conducted the testing.

Copy of marking plate:
The artwork below may be only a draft. The use of certification marks on a product must be authorized by the respective NCBs that own these marks.

Instruction:
Provide copy of a new marking plate (or artwork) for new models added, or when marking plate changed due to modified ratings, trademark, and other changes, as applicable.
See also E.1.6 for further instructions
Test item particulars: 

Classification of installation and use:  
Supply Connection:  

Possible test case verdicts:  
- test case does not apply to the test object: N/A  
- test object does meet the requirement: P (Pass)  
- test object does not meet the requirement: F (Fail)  

Testing:  
Date of receipt of test item: Provide date of samples received for this Amendment  
Date (s) of performance of tests: Provide dates of tests performed for this Amendment. Provide additional details in Summary of testing.  

General remarks:  
"(See Enclosure #)" refers to additional information appended to the report.  
"(See appended table)" refers to a table appended to the report.  

Throughout this report a comma / point is used as the decimal separator. Select as appropriate  

Manufacturer's Declaration per sub-clause 4.2.5 of IEC 02:  

The application for obtaining a CB Test Certificate includes more than one factory location and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided:  

☐ Yes  
☐ Not applicable  

When differences exist; they shall be identified in the General product information section.  

Name and address of factory (ies): Instruction: Provide list of names of factories and addresses or refer to original report.  

General product information and other remarks:  
Instruction: Describe any product changes or other relevant information.  

Amendment 1 Report:  
The original Test Report Ref. No. TR-12345, dated 2022 March 7 was modified on 2022 April 4 to include the following changes and/or additions:  
New models added:  
The two new Models AP139 and AP154 are identical to the previous Model AP-123, except for minor variations in the SELV circuitry and markings. After construction review and verification of electrical spacing, no additional tests were considered necessary.  

Amendment 2 Report:  
The original Test Report Ref. No. TR-12345, dated 2022 March 7 was additionally modified on 2022 April 14 to include the following changes and/or additions, which were considered technical modifications:  
All three models AP123, AP139 and AP154 have changes to electronic components and circuitry. Due to changes in the component layout, the modified units have reduced size casing.
Additional testing was conducted as reported under Summary of testing.
A new photo of modified printed wiring board with new component layout was added in this Amendment Report.

Additional pages (a total of x pages, such as additional test tables for conducted tests, component table) or pages from the original Report that are affected by the product modifications shall follow pages shown above. A photo-documentation may need to be also attached to this Amendment Report.

NOTE 2: The example shows Amendment No. 2 Report issued due to the technical modification to the product (critical components were added, and case size changed) with limited testing. However, the original Test Report was already modified once by Amendment 1 Report, which has been issued because new models were added. In this case, after engineering review of the differences and similarities between originally tested model and new models, no tests were considered necessary. In the provided example, the history of all changes and the reasons why the Amendment Reports have been issued is clearly documented. The entire history of changes may be repeated in each Amendment Report as illustrated in the above example.

NOTE 3: Both Amendment Report 1 and 2 involved changes that required engineering evaluation, therefore; only one more technical modification to the product is still allowed in the example given above before a new CB Test Report will become necessary.
### Annex G — Examples of TRF Identification and naming of its corresponding file

#### G.1

The following is an overview and collection of examples regarding the identification of TRFs. It covers newly developed TRFs (subclause 3.3 of this OD) as well as those subjected to modification (Part 4 of this OD).

<table>
<thead>
<tr>
<th>New TRF or new Editions/Amend. of the Standard</th>
<th>Administratively modified TRF (new template)</th>
<th>Technical changes to TRF</th>
<th>Corrections to TRF (non-technical)</th>
</tr>
</thead>
<tbody>
<tr>
<td>OD-2020 reference</td>
<td>Subclause 3.3</td>
<td>Subclause 4.2</td>
<td>Subclause 4.3</td>
</tr>
<tr>
<td>Standard reference</td>
<td>IEC6xxxx_x__xxx</td>
<td>Standard reference on TRF stays unchanged</td>
<td>Standard reference on TRF stays unchanged</td>
</tr>
<tr>
<td></td>
<td>IEC8xxxx_x__xxx</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>ISO8xxxx_x__xxx</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Version (Letter)</td>
<td>&quot;A&quot; for TRF of new standard or increased letter for TRFs according to new Editions/Amend. of the Standard</td>
<td>Version letter unchanged</td>
<td>Version letter changed (increased)</td>
</tr>
<tr>
<td>Master TRF date (yyyy-mm-dd)</td>
<td>Date of publication of a new TRF</td>
<td>Date of publication of Administratively modified TRF</td>
<td>Date of publication of Corrected TRF</td>
</tr>
<tr>
<td>&quot;Track Changes&quot; TRF (sub-clause 4.3.1 &amp; 4.4.1)</td>
<td>- (not required)</td>
<td>- (not required)</td>
<td>available (through weekly TRF distribution e-mail)</td>
</tr>
<tr>
<td>File name</td>
<td>IEC6xxxx_x__xxL__yyyy-mm-dd</td>
<td>Standard reference per row 1 &amp; version letter per this column in row 2 with updated publication date of TRF (matching &quot;Master TRF&quot; date)</td>
<td>Standard reference per row 1 &amp; version letter per this column in row 2 with updated publication date of TRF (matching &quot;Master TRF&quot; date)</td>
</tr>
<tr>
<td></td>
<td>IEC8xxxx_x__xxL__yyyy-mm-dd</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>ISO8xxxx_x__xxL__yyyy-mm-dd</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Clarification for code letters used:**
- x: numbers of the corresponding IEC/ISO standard
- L: Letter for an unambiguous identification of the TRF version (always new version letter for new standard edition or amendments)
- y: year of the publication of TRF
- m: month of the publication of TRF (two-digits numerical expression)
- d: day of publication of TRF (two-digits)

**NOTE:** The version letter in the TRF identification number is reserved for a particular version and is added by the TRF Originator. (In case of doubt, the IECEE Secretariat acting as the TRF Administrator will verify the correctness of the TRF number).

**NOTE 2:** Once the versions used for TRFs reached letter Z, the next and consecutive identifications are AA, BB, CC and so on.
### G.2 Elements of a TRF number and its corresponding TRF file name:

<table>
<thead>
<tr>
<th>Document type</th>
<th>Prefix</th>
<th>Test Report Form Number</th>
<th>Master Attachment (Date)</th>
<th>In the TRF form and on the Website</th>
</tr>
</thead>
</table>

Note: The prefix letters in the prefix are either a country code(s) (US/CA) or a region code (EU). The letter ND after country code mean National Differences and letter GD after EU mean Group Differences.

### G.3 The meaning of the Test Report Form Number (Examples based on new Standard references – See clause 3.3)

- **IEC60601_2_2F** means a TRF for IEC 60601-2-2:2009 – TRF version “F”
- **IEC60950_1&IEC60601_1A** means a TRF covering two different standards IEC 60950-1 and
<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EU_GD_IEC60335_2_14P</td>
<td>IEC 60601-1, TRF version “A” (see Clause 3.8.2)</td>
</tr>
<tr>
<td></td>
<td>means a TRF covering European Group Differences for IEC 60335-2-14:2016 version “P” (see Clause 3.5.1)</td>
</tr>
<tr>
<td>US_ND_IEC60065J</td>
<td>means a TRF covering US National Differences for IEC 60065:2001 with AMD1:2005 TRF (see Clause 3.5.1)</td>
</tr>
<tr>
<td>MY_ND_IEC60065J</td>
<td>means a TRF covering Malaysian National Differences for IEC 60065:2001 60065:2001 with AMD1:2005 TRF (see Clause 3.5.1)</td>
</tr>
</tbody>
</table>
Annex H – Use of TRFs for purposes other than CB Scheme

If an official TRF is used by non-IECEE members or for purposes other than the CB Scheme, the IECEE/IEC logo and the reference to the CB Scheme procedure shall be removed; however, the copyright statement shall be retained.

The copyright statement and additional information is always required and shall not be modified or removed from the TRF except as shown below.

Copyright © 2016 IEC System of Conformity Assessment Schemes for Electrotechnical Equipment and Components (IECEE System). All rights reserved.

This publication may be reproduced in whole or in part for non-commercial purposes as long as the IECEE is acknowledged as copy-right owner and source of the material. IECEE takes no responsibility for and will not assume liability for damages resulting from the reader’s interpretation of the reproduced material due to its placement and context.

If this Test Report Form is used by non-IECEE members, the IECEE/IEC logo and the reference to the CB Scheme procedure shall be removed.

This report is not valid as a CB Test Report unless signed by an approved CB Testing Laboratory and appended to a CB Test Certificate issued by an NCB in accordance with IECEE 02.

General disclaimer:
The test results presented in this report relate only to the object tested.
This report shall not be reproduced, except in full, without the written approval of the issuing CB Testing Laboratory. The authenticity of this Test Report and its contents can be verified by contacting the NCB, responsible for this Test Report.
Annex I – TRF Flowchart for Originators, Administrator and Users

NOTE: The IECEE Secretary may also send each TRF to the appropriate TC for comments or for clarification of the requirements. See also clause 2.6., Procedure for the circulation of TRFs to TC/SC Officers.
Annex J – Distribution of TRFs

The IECEE Secretariat maintains a list of completed TRFs and TRFs in preparation, which includes the expected completion date.

The assigned TRF Originator shall always inform the IECEE Secretariat on completion of the relevant TRF(s). The completed Master TRF(s) shall be sent by e-mail to the IECEE Secretariat in Geneva for distribution.

Contact Person at the IECEE Secretariat is:

Ms. Sonia Alves-Polidori
3, rue de Varembé
PO Box 131
CH-1211 GENEVA 20
SWITZERLAND
E-mail: secretariat@iecee.org
Tel: +41 22 919 0223

Suggestions about changes/improvements to the TRF template(s) and Operational Document OD-2020 shall be communicated to the IECEE Contact Persons identified above.

The IECEE Secretariat shall provide the collected input to the WG 9 (TRFs) Convener for review and discussion at the next WG meeting, and later report to the CMC, when found appropriate.

Annex L – TRFs on IECEE Website

TRFs shall be published on IECEE Website and accessible to members under a password. A designated area on the Website shall be reserved for standardized attachments.

The originator shall always use the latest TRF template available on the IECEE Website at http://www.ieCEE.org/cbscheme/html/cbtrep.htm. This applies to the TRF itself, to the National Differences templates and standardized attachments.

The list of available Test Report Forms as well as the list of Test Report Forms in preparation (including the expected completion date) can also be found on the IECEE Website.

Link to the TRF and National Differences templates, and List of available TRFs
